

Key Insights

1. Revenue & Orders Fulfillment Analysis

- a) 2023 generated highest revenue (735218.44) with 3.24% growth from 2022.
- b) 2024 generated lowest revenue (699269.85) with 4.89 % reduction from 2023.
- c) Highest number of pending orders in 2023 (979) & 2024 (946).
- d) In 2022, delivered orders were highest (975) with lowest pending orders.
- e) In 2023, number of orders increased (+59) while significant orders decreased (-143) in 2024 causing revenue loss.
- f) 11.23% revenue loss is seen from March to April 2025
- g) April 2025 has highest shipped orders with lowest delivered orders (opposite to March).

2. Customer Segmentation Analysis

- a) Customer 2633 has highest repeated orders (8).
- b) 50.25% of customers have low purchasing behavior (≤ 2 repeat orders).
- c) Low purchasing customers have more pending orders while moderately (3-5 repeat orders) and highly purchasing (> 5 repeat orders) customers have high rate of delivered orders.
- d) Low purchasing customers played vital role in 2023 revenue by generating highest revenue i.e. 380087.
- e) Revenue from low purchasing customers decreased by 26.48% in April 2025 indicating large influence on revenue loss occurred in April
- f) Average time taken between orders for highly purchasing customers is lowest (52 mins) than other purchasing groups of customers.

3. Payment Processing Analysis

- a) Failed payments have the highest average payment amount (255) followed by pending payments.
- b) Bank transfer has high failed payments and low successful payments indicating a potential issue in the process. However, Paypal has most successful payments and fewest failed payments suggesting a good payment method.
- c) Paypal has the highest success rate of payments i.e. +11.3% followed by credit card then bank transfer
- d) From 2024, number of successful payments have been increased with total number of payments and total amount of payments due to frequent use of Paypal in 2024 and 2025.

4. Orders & Payments details report

- a) Orders table contains unique order id linked to customers (customer id), date, amounts and the status of orders (pending, delivered and shipped).
- b) Payments deals with unique payment id, dates, amounts, payment processing methods (bank transfer, credit card and Paypal) and payment status (pending, failed and completed).
- c) A total of 5505 orders haven't been processed for payments.

5. Customer Retention Analysis

- a) The dashboard demonstrates 2932 total new customers compared to 4402 total retained customers indicating a strong acquisition.
- b) Overall retention rate is 60% meaning acquired customers are not making repeat orders.
- c) General total customer count significantly decreased from January to July highlighting churn was higher during this period.
- d) New customers intake peak in early year (January to March) but customers show low and unstable monthly retention.

Recommendations:

- 1) Address pending orders especially for customers with ≤ 2 repeat orders with fixing orders fulfillment and payment issues.
- 2) Boost loyalty programs like rewards, personalized offers for frequent purchases.
- 3) Understand the problems or reasons of customer loss by engaging with customers and try to implement them.
